

Jianglan Wei

jianglan@cmu.edu | jianglanwei.com

ACADEMIC BACKGROUND

- **Carnegie Mellon University** 2026.08 - 2028.06 (expected)
Robotics Institute, School of Computer Science
Master of Science in Robotics
◦ **Advisor:** David Held
Pittsburgh, United States
- **University of California, Berkeley** 2024.08 - 2025.08
Berkeley Artificial Intelligence Research (BAIR)
Visiting Student & Research Intern
◦ **Advisor:** Masayoshi Tomizuka
◦ **GPA:** 4.00/4.00
Berkeley, United States
- **Huazhong University of Science and Technology** 2022.09 - 2026.06
School of Artificial Intelligence and Automation
Bachelor of Engineering in Artificial Intelligence
◦ **Advisor:** Zhigang Zeng
◦ **Major GPA:** 91.23/100.00
Wuhan, China

PUBLICATIONS

- **Reimagination with Test-time Observation Interventions**  [Paper](#)
Yuxin Chen*, Jianglan Wei*, Chenfeng Xu, Boyi Li, Masayoshi Tomizuka, Andrea Bajcsy, Thomas Tian
IEEE International Conference on Robotics and Automation (ICRA), 2026
Best Paper Finalist at RSS Out-of-Distribution Generalization Workshop, 2025
◦ Propose a test-time strategy that enables world models to predict more reliable action outcomes in open-world scenarios where unanticipated visual distractors are inevitable.
◦ ReOI improves task success rate by up to 3x in the presence of noval distractors, significantly outperforms action verification that relies on world model predictions without imagination interventions.
- **MEReQ: Max-Ent Residual-Q Inverse RL for Sample-Efficient Alignment from Intervention**  [Paper](#)
Yuxin Chen*, Chen Tang*, Jianglan Wei, Chenran Li, Thomas Tian, Xiang Zhang, Wei Zhan, Peter Stone, Masayoshi Tomizuka
Conference on Robot Learning (CoRL), 2025
◦ Propose an interactive imitation learning algorithm where human expert observes the policy's execution and provides interventions for the policy to imitate.
◦ Instead of inferring the complete human behavior characteristics, MEReQ infers a residual reward function that captures the discrepancy between the human expert and prior policy's underlying reward functions. This makes MEReQ more sample-efficient compared to baselines.
- **Interleave-VLA: Enhancing Robot Manipulation with Image-Text Interleaved Instructions**  [Paper](#)
Cunxin Fan*, Xiaosong Jia*, Yihang Sun, Yixiao Wang, Jianglan Wei, et al.
The International Conference on Learning Representations (ICLR), 2026
◦ The first robot learning paradigm capable of comprehending interleaved image-text human instructions.
◦ Interleave-VLA improves out-of-domain generalization to unseen objects by 2-3x compared to SOTA baselines, and can adapt to new instruction formats in a zero-shot manner.
- **HD3C: Efficient Medical Data Classification for Edge Devices**  [Paper](#)
Jianglan Wei*, Zhenyu Zhang*, Pengcheng Wang*, Mingjie Zeng, Zhigang Zeng
CAAI International Conference on Artificial Intelligence (CICAI), 2026
◦ Propose an energy-efficient medical data classifier capable of embedded robotics deployment.
◦ HD3C is 350× more energy efficient than deep learning baseline while achieving similar accuracy, and demonstrates exceptional robustness to noise, limited training data, and hardware error.
- **DSN: Energy-Efficient EMG Signal Classification for Edge Healthcare**  [Paper](#)
Zhenyu Zhang*, Xianzhe Meng*, Jianglan Wei, Mingjie Zeng, Zhigang Zeng
Neural Networks, Vol. 205
◦ Propose a framework that combines Spiking Neural Network (SNN) and Hyperdimensional Computing (HDC) for sEMG signal classification.
◦ DSN is 12.03× more energy-efficient compared to LSTM and 3.46× compared to GRU, while maintaining over 90% accuracy with only 20% of the training data.

HONORS AND AWARDS

• Chiang Chen Overseas Fellowship (\$50,000) Chiang Chen Industrial Charity Foundation	2026.03
• Scholarship for Outstanding Student (CN¥100,000) Huazhong University of Science and Technology	2025.10
• Student Speaker for Berkeley Global Access Closing Ceremony University of California, Berkeley	2025.05
• UC Berkeley BGA Scholarship 2024 (Top 10 students) University of California, Berkeley	2024.12
• National 1st Prize, CUMCM 2024 (Top 0.5% out of 59278 teams) China Society for Industrial and Applied Mathematics (CSIAM)	2024.11
• People’s Scholarship 2022, 2023, 2025 Huazhong University of Science and Technology	2022.10, 2023.10, 2025.10

LAST UPDATED: AUG 10, 2026
